

TECHNOLOGY & INTELLECTUAL PROPERTY SERVICES

LAWYERS WHO KNOW TECH/IP

Stoel Rives helps protect cutting-edge original thinkers throughout the West. Our attorneys have credentials and experience in a wide range of technical disciplines, including electrical engineering, physics, software engineering, optics, mechanical engineering, chemistry, biology and life sciences. We can guide you through the complex legal maze of patents, trademarks and copyrights.

Let Stoel Rives help you protect some of your most important assets: your ideas.

Trade Secrets & Confidential Information

We assist clients with a wide range of matters relating to the protection of trade secrets and confidential information. Our work includes the preparation and negotiation of agreements with employees restricting their employment and post-employment activities (such as assignment of inventions, noncompetition, no solicitation and “right of first refusal” agreements); preparation and negotiation of nondisclosure agreements; creation of internal systems designed to preserve and protect trade secrets; preparation and negotiation of agreements with OEMs, VARs and contract service providers designed to protect trade secrets; and litigation services associated with trade secret disputes.

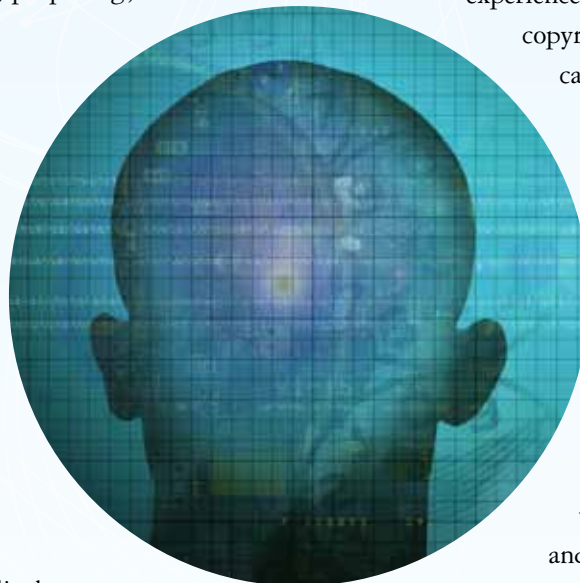

Trademarks The firm has experience in all areas of trademark protection and practice. We represent clients in trademark matters in state and federal courts and before the Patent and Trademark Office. Services to our clients include developing trademark protection strategies; performing trademark searches; preparing, filing and prosecuting trademark applications in the United States and internationally; preparing, filing and prosecuting trademark oppositions and cancellations; and preparing and litigating trademark infringement cases.

Patents We secure patent rights for inventions in numerous technological fields. These inventions include therapeutic and diagnostic biotechnology applications, electron devices, sophisticated analog and digital electronic circuitry, electro-optical systems, optical devices and systems, image display systems, color inkjet printers, hardware-

and software-based computer systems, and numerous mechanical devices and systems. Our lawyers engage in the acquisition and licensing of patent rights in inventions and have experience in patent infringement litigation involving complex technologies such as holography, geometric optics, liquid crystal displays, automated machine vision, computer graphic displays, miniature electronic component testers and automatic fluid analysis.

Copyrights We secure copyright protection for original works of all appropriate kinds, including computer programs. Our lawyers have extensive experience in handling disputes involving material protected by copyright. Specific services include developing copyright protection strategies; performing copyright searches; preparing, filing and prosecuting copyright applications; preparing and negotiating copyright licenses; and providing services associated with copyright infringement litigation.

IP Litigation Our IP litigators have substantial experience handling patent, trademark, copyright, trade secret and false advertising cases. In the patent area alone, we have represented owners in suits against infringers and defended clients against infringement claims in cases involving a wide range of technologies, including optics, liquid crystal displays, oscilloscopes, inkjet printers, glass break detectors, smoke detectors, burglar alarms, testing human heart tissue, graphics display terminals, focused ion beam systems, and automated food inspection and processing systems. Our experience in the non-patent IP areas is similarly extensive.

Technology Licensing & Distribution

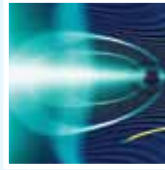

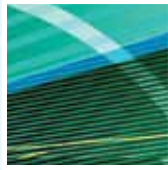

Increasingly, our clients are acting as both licensors and licensees of technology. The subject matter of these licenses may be a patent, copyright, trade secret, know-how or trademark, or a combination of various forms of intellectual property. We have assisted clients with numerous foreign and domestic joint ventures and strategic alliances. Our lawyers have participated in organizing and restructuring major national and international distribution networks, and balancing and managing the many antitrust, technology protection, Uniform Commercial Code, export/import and other legal concerns raised by complex distribution arrangements, including agreements with OEMs, dealers, distributors and sales representatives.

Protection Programs Our intellectual property protection services include assistance in the development of company-resident protection programs. Such programs, developed according to each client's specialized needs, may include confidentiality agreements, employment agreements, trade secret protection programs, and intellectual property management. We believe that effective protection of valuable proprietary information begins with the development of internal intellectual property education and confidentiality programs. Once established, these programs provide a strong foundation for effectively executing other types of protection programs, including patents, trademarks and copyrights.

REPRESENTATIVE CLIENTS

@Once Corp.	Healthnotes, Inc.	Pliant Corporation
Absorbent Technologies, Inc.	Huntsman Biotechnology Corporation	ProSight, Inc.
