

Technology

There is no industry that has a more significant impact on the way we live and work than the technology industry. The mainstreaming of cloud computing and machine learning, along with new digital applications in energy, medicine, retail, consumer products, transportation and more are allowing other industries to grow faster through increased efficiency and development of new business lines. As the technology paradigm shifts from process automation to cognitive functions, there will be significant changes in the legal framework needed to form, protect and grow your company.
